Reliable sump emptying...

doesn't have to be a challenge

- No blocking
- No abrasive wear
- Self-priming and dry running
- Pumps reversible
- Simple installation and lowest whole life cost
- Low maintenance
- Chemically resistant hoses
- Flow rates to 80m³/hr

Value for life

The Environment Agency's Pollution Prevention Guidelines provide clear instructions for dealing with trade effluent. However, complying with these regulations can be hindered by the notorious unreliability of the pumps used in the waste disposal process.

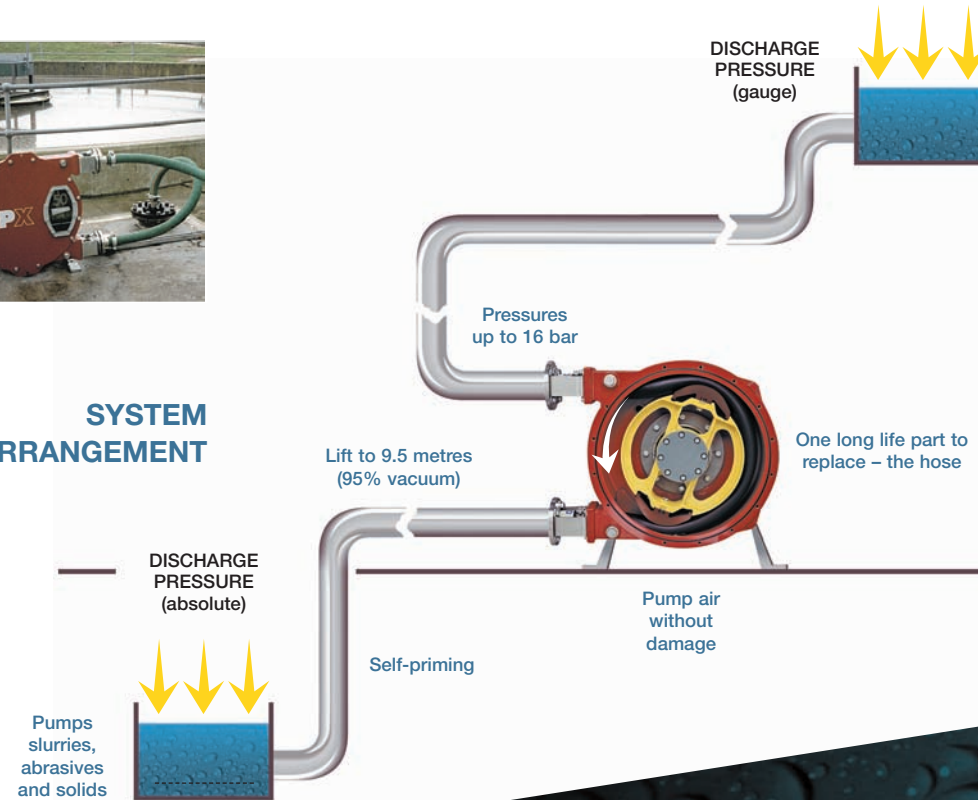

There is only one type of pump that can offer you the reliability you need to meet your legislative responsibilities - the Watson-Marlow Bredel SPX peristaltic hose pump.

The pumps can handle difficult fluids containing grit, oil, rags, stones and other debris. The sump waste passes through the bore of the hose without blockage or wear. The clear flow path with no seals or valves means the causes of failure and expense experienced by other pump types is eliminated.

Watson-Marlow Bredel hose pumps are ideally suited for all sump-emptying applications.

SYSTEM ARRANGEMENT

To find out how you can improve your plant operation and save money, call Watson-Marlow Bredel or return the attached postage paid card.
