Inch size tapered roller bearings

Features	Tapered roller bearings comprise solid inner and outer rings with tapered raceways and tapered rollers in a window cage.
	The classification and designation of tapered roller bearings in inch sizes is based on:
	■ ANSI/ABMA 19.2:2013 (prefixes K and AK).
	The classification and designation of tapered roller bearings in metric sizes is based on:
	■ ANSI/ABMA 19.1:2011 (prefixes KJ and AKJ).
Note!	Abbreviations of standards used in this description:
	■ ANSI/ABMA: American National Standards Institute/ American Bearing Manufacturers Association
	■ ISO: International Organization for Standardization.
X-life	X-life is the premium brand that identifies particularly high performance products under the INA and FAG brands. They are characterised by longer rating life and operating life, due to higher basic dynamic load ratings compared to the previous standard.
	This higher performance results from the use of state of the art manufacturing techniques and improved internal constructions. They lead to better and more uniform surfaces and contact areas and thus optimised load distribution in the bearing.
	The detailed technical enhancements offer a range of advantages, such as:
	■ up to 20% higher basic dynamic load ratings C_r
	■ higher running accuracy and smoothness of running
	■ running with reduced friction and greater energy efficiency (reduction in friction up to 50%, in the case of tapered roller bearings with a steep taper up to 75%)
	■ lower heat generation in the bearing
	■ higher limiting speeds
	■ lower lubricant consumption and, consequently, longer maintenance intervals with relubrication
	■ a measurably longer operating life
	■ high reliability and operational security
	■ lower overall operating costs
	■ compact, environmentally-friendly bearing arrangements.
	These advantages improve the overall cost-efficiency of the bearing position significantly and thus bring about a sustainable increase in the efficiency of the machine and equipment.
	X-life tapered roller bearings include the suffix XL in the designation.

Other tapered roller bearings to ANSI/ABMA

In addition to the bearings named in the dimension tables, Schaeffler offers a large number of other tapered roller bearings to ANSI/ABMA. Furthermore, Schaeffler offers bearings for special applications as F- and Z-numbers that are largely compliant with ANSI/ABMA. For details on interchangeability, please contact Schaeffler.

An upgrade to X-life performance is possible.

- Catalogue GL 1, Large Size Bearings.

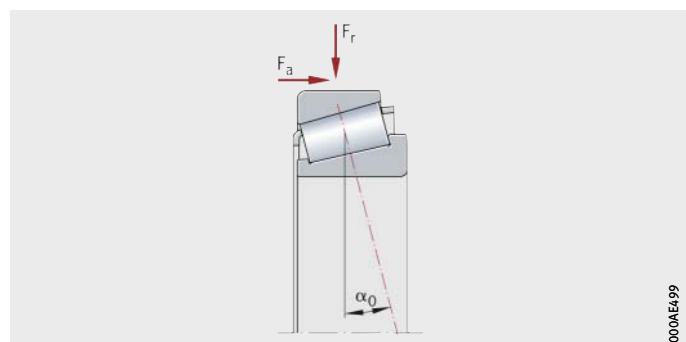

Load carrying capacity

Single row tapered roller bearings can support axial forces in one direction and high radial forces, *Figure 1*. However, they must always be axially adjusted against a second bearing fitted in a mirror image arrangement. This bearing combination is then fitted in an O or X arrangement.

The axial load carrying capacity of the bearings is dependent on the nominal contact angle α_0 , *Figure 1*. The greater this angle, the higher the axial load to which the bearing can be subjected. The size of the contact angle, and thus the load carrying capacity of the bearing, is indicated by the value e in the dimension tables.

F_r = radial load
 F_a = axial load
 α_0 = nominal contact angle

Figure 1
Single row tapered roller bearing

000AE69

If two bearings of the same size and design are fitted immediately adjacent to each other in an O or X arrangement, the basic dynamic load rating C_r , the basic static load rating C_{0r} and the fatigue limit load C_{ur} of the bearing pair are as follows:

- $C_r = 1,715 \cdot C_{r \text{ single bearing}}$
- $C_{0r} = 2 \cdot C_{0r \text{ single bearing}}$
- $C_{ur} = 2 \cdot C_{ur \text{ single bearing}}$

Product data for single bearings, see dimension tables.

Inch size tapered roller bearings

Matched bearings	Matched tapered roller bearings support higher radial forces than single row tapered roller bearings. In X and O arrangements, axial forces and moment loads are supported in both directions. The tandem arrangement can only support axial forces in one direction. Matched tapered roller bearings to ANSI/ABMA are available by agreement.
Further information	■ TPI 245, Matched Tapered Roller Bearings.
Compensation of angular misalignments	The modified line contact between the tapered rollers and the raceways ensures optimum stress distribution at the contact points and prevents stress increases at the edges. As a result, the bearings can tolerate certain angular misalignments and give better support of moment loads.
Permissible angular misalignment	 If the load ratio $P/C_{0r} \leq 0,2$, the tilting of the bearing rings relative to each other must not exceed 4 angular minutes. This is, however, subject to the position of the shaft and housing axis remaining constant (no dynamic movements). If higher loads, skewing or dynamic angular misalignments are present, please contact Schaeffler.
Lubrication	Single row tapered roller bearings are not greased. These bearings must be lubricated with oil or grease. When using bearings with plastic cages, compatibility between the lubricant and the cage material must be ensured if synthetic oils, lubricating greases with a synthetic oil base or lubricants containing a high proportion of EP additives are used. Aged oil and additives in the oil can impair the operating life of plastics at high temperatures. As a result, stipulated oil change intervals must be strictly observed.
Sealing	Single row tapered roller bearings are not sealed. This means that sealing of the bearing position must be carried out in the adjacent construction. This must reliably prevent: ■ moisture and contaminants from entering the bearing ■ the egress of lubricant from the bearing position.

Temperature range

- The operating temperature of the bearings is limited by:
- the dimensional stability of the bearing rings and tapered rollers
 - the cage
 - the lubricant
 - the seals.

Possible operating temperatures of tapered roller bearings, see table.

Permissible temperature ranges

D ≤ 220 mm		D > 220 mm	
from	to	from	to
-30 °C	+120 °C	-30 °C	+200 °C

In the event of anticipated temperatures which lie outside the stated values, please contact Schaeffler.

Cages

Open tapered roller bearings have sheet steel cages.
Plastic cages are available by agreement.

For high continuous temperatures and applications with difficult operating conditions, bearings with sheet steel cages should be used. If there is any uncertainty regarding cage suitability, please consult Schaeffler.

Prefixes

Prefixes for available designs, see table.

Available designs

Prefix	Description
K	Schaeffler tapered roller bearings (inch sizes)
AK	Schaeffler tapered roller bearings with modified internal construction (inch sizes)
KJ	Schaeffler tapered roller bearings (metric sizes)
AKJ	Schaeffler tapered roller bearings with modified internal construction (metric sizes)

Suffixes

Suffixes for available designs, see table.

Available designs

Suffix	Description	Design
XL	X-life	-
A, C, S, X	Dimensional differences of bore, outside diameter, width or chamfer dimension compared to bearing without suffix to ANSI/ABMA 19.2:2013 and ANSI/ABMA 19.1:2011	
P5	Bearing of tolerance class 5 to ISO 492:2014	Special design ¹⁾
Q3	Bearing of tolerance class 3 to ANSI/ABMA 19.2:2013	

¹⁾ Available by agreement and in certain series.

Inch size tapered roller bearings

Design and safety guidelines

Minimum radial load

In order that no slippage occurs between the contact partners, tapered roller bearings must be constantly subjected to a sufficiently high load. Based on experience, a minimum radial load of the order of $P > C_{0r}/60$ is necessary. In most cases, however, the radial load due to the inherent weight of the bearing parts and the external forces is already higher than the requisite minimum load.

If the minimum radial load is lower than stated, please consult Schaeffler.

Speeds

The limiting speed n_G is the kinematically permissible speed of the bearing. Even under favourable mounting and operating conditions, this value should not be exceeded without prior consultation with Schaeffler.

Basic load ratings

The dynamic load carrying capacity is described in terms of the basic dynamic load rating C and the basic rating life. The dynamic load carrying capacity is described in terms of the basic dynamic load ratings. The basic dynamic load ratings C for Schaeffler tapered roller bearings are based on ISO 281. The basic rating life is the completion of 1 million revolutions at a requisite reliability of 90% by a sufficiently large number of apparently identical bearings before the first indications of material fatigue appear.

All well-known rolling bearing manufacturers work in accordance with ISO 281. This allows the customer to achieve a transparent comparison of the performance capability of the products.

In North America, some competitors apply a different method to tapered roller bearings that uses the basic load rating C_{90} . In this case, the basic rating life is the completion of 90 million revolutions instead of 1 million revolutions at the same requisite reliability. The calculation method for C_{90} with its weighting of the individual input values differs from the method in accordance with ISO 281. As a result, a direct comparison or a simple conversion of the basic load ratings C_{90} and C in accordance with ISO 281 is not possible and is misleading.

In some cases, the basic load rating C_1 is indicated, which is the result of applying a simple conversion factor to the basic load rating C_{90} and is claimed to allow comparison with the basic load rating C in accordance with ISO 281. Due to this simplified conversion, however, the basic load rating C_1 with an identical internal geometry and thus identical calculation values is approx. 10% to 15% higher than the basic load rating C . As a result, a direct comparison of the basic load ratings C and C_1 is also misleading.

Accuracy **Chamfer dimensions**

Minimum chamfer dimensions r_{min} for tapered roller bearings in accordance with ANSI/ABMA correspond to:

■ ANSI/ABMA 19.2:2013 for tapered roller bearings in inch sizes

■ ANSI/ABMA 19.1:2011 for tapered roller bearings in metric sizes.

Product data for single bearings, see dimension tables.

Tolerances

Tapered roller bearings in inch sizes are produced as standard in accordance with the following tables. The values contained therein fulfil the requirements of ANSI/ABMA 19.2:2013 and, in some cases, exceed these by a significant margin. The bore and outside diameters have plus tolerances.

Tolerances of the inner ring, tolerances of the outer ring and width tolerances, see pages starting page 8.

Tapered roller bearings in metric sizes have dimensional, running and width tolerances to tolerance class N in accordance with ANSI/ABMA 19.1:2011 (corresponding to tolerance class 6X in accordance with ISO 492:2014). The bore and outside diameters have minus tolerances.

Tolerances of the inner ring, tolerances of the outer ring and width tolerances, see pages starting page 10.

X-life bearings achieve, in comparison with bearings without X-life characteristics, further improvements in the radial runout values t_{Kia} and t_{Kea} , as well as separate axial runout values t_{Sia} , *Figure 2*, page 8.

All tapered roller bearings to ANSI/ABMA fulfil the tolerance requirements in accordance with ANSI/ABMA 19.2:2013 or ANSI/ABMA 19.1:2011 or have even more precise tolerances.

As a result, these bearings are interchangeable with competitor products.

Inch size tapered roller bearings

Tolerance symbols

U μm
 Upper limit deviation
 L μm
 Lower limit deviation
 t_{Sia} μm
 Axial runout to Schaeffler standard.

For further tolerance symbols, see ANSI/ABMA 19.2:2013 or ANSI/ABMA 19.1:2011.

Inch size tapered roller bearings

Ordering example, ordering designation

The designation of bearings follows a set model. The construction of designations is in accordance with ANSI/ABMA 19.2:2013 and ANSI/ABMA 19.1:2011. Example, *Figure 3*.

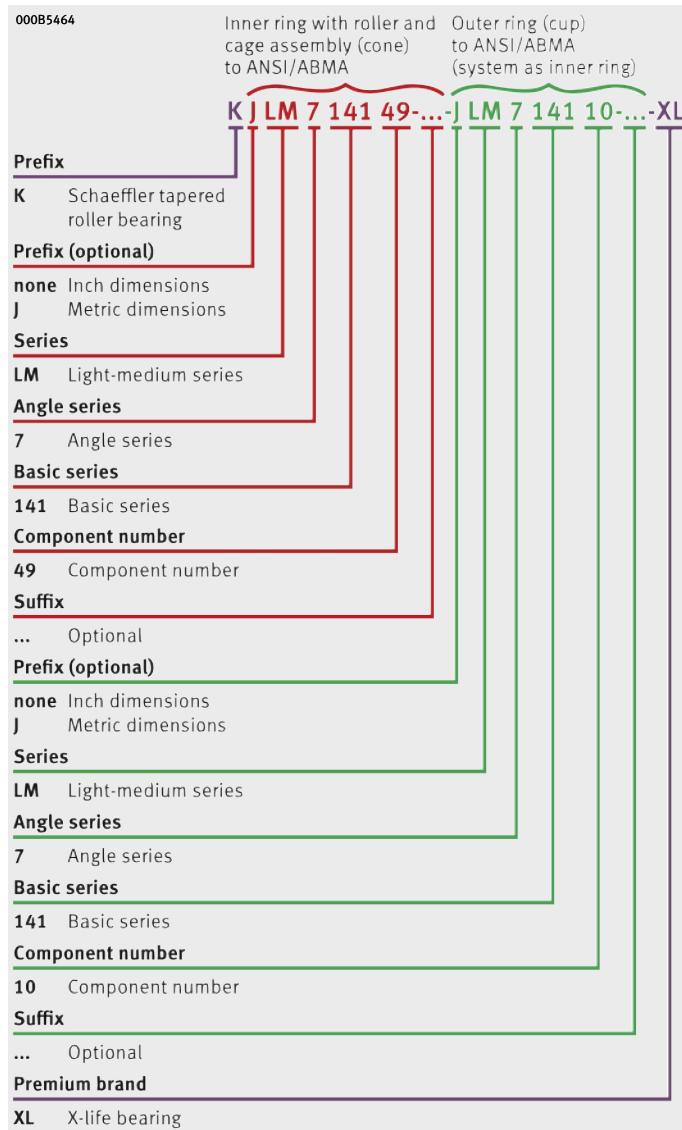

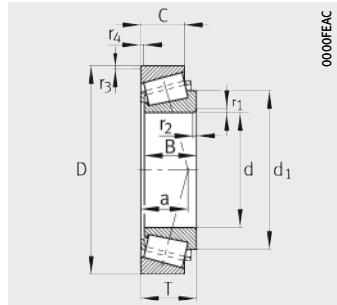

Figure 3
Structure of designation,
single row tapered roller bearing
to ANSI/ABMA

The designation of the complete bearing comprises the designation of the inner ring with roller and cage assembly (cone) and that of the outer ring (cup). Cones and cups of the same bearing series (identical internal construction) can be used in any combination to form a complete bearing.

For general availability, please contact Schaeffler.

By agreement, other tapered roller bearings to ANSI/ABMA in X-life design are available.

Furthermore, tapered roller bearings to ANSI/ABMA are available by agreement in numerous other designs and sizes as well as for special applications.

For general availability, please contact Schaeffler.

By agreement, other tapered roller bearings to ANSI/ABMA in X-life design are available.

Furthermore, tapered roller bearings to ANSI/ABMA are available by agreement in numerous other designs and sizes as well as for special applications.
